Home page:

This should be having a cross effect, where we give user 2 buttons to see next and previous photo, if Random photos is given the value more than 0 seconds, we will automatically show next photos after given second.

\* if we click on menu, Random photos field will be usually 3 seconds, which means for every 3 seconds, next photo should be shown in the home page, if user give 0 (zero) as value, then don't do slideshow of photos, just keep whatever photo is there in the homepage.

\* All photos; if we click on "All photos", it should go to the new page and should show all the photos that are present inside "photo" folder in the Vapo in a gallery mode, if user click on one particular photo, then it should show that photo focused in that page.
